

View Modeling Wireframes Feedback

Overall Feedback

- Make sure you are using the use cases we made in the SRS to confirm it follows a sequential flow for the user
- If you guys want to see a good example of detailed wireframes, Checkout Chayton's wireframes where he included a view for each option in his "Attendance Management" view and Julia's option views for her "Course Management" view.
- I added a couple new wireframes we should have so make sure to create those so we can have them for production.

Login View (Bharat)

- We will not need a "Register" or "Signup" link
- Need a wireframe for the "Forgot Password" view
- Should display "ClassMate" logo where you put "Login View"

Dashboard Student View (Bharat)

- Should display list of courses where student can click a course to see attendance (see use cases VDAC and VOAC)

Dashboard Faculty View (Bharat)

- Make sure faculty dashboard can display multiple courses (make a wireframe for this)
- All settings regarding a student's attendance for a course should be displayed when they click the student for the course (make a wireframe for this)
- I would suggest a similar course dashboard to Canvas where when you click the course it takes you to the list of students and all options

Dashboard Admin View (Bharat)

- We will need views for Create Faculty Account, Edit Faculty Account, and Delete Faculty Account
- We will need a view for when you click a course to manage it
- I am not sure of the difference between "Manage Courses" and "Course-Wise Attendance." Could you elaborate on this?

Attendance Recording View For Students (Chayton)

- APPROVED!!
- Nice work including the success view, as well!

Attendance Management View for Faculty (Chayton)

- APPROVED!!

Attendance Record Display View (Chayton)

- Make sure to include that you can print an individual student's attendance record

Add Record View (Chayton)

- We will need to confirm with the team who did data modeling how they are storing the status of attendance (bool, string, etc.)
- I like the minimalist design

Edit/Delete Records View (Chayton)

- Just need a little more elaboration on what editing and deleting records will look like. Some views for these would help.

Course Management View (Julia)

- I would switch "Upload File" to "Bulk Onboard" or include this in the "Manage Students" Section
- I like the tabular format

Student List View (Julia)

- Make a view for when you click the student attendance view button and make sure to include printing as an option

Student Modification View (Julia)

- Include view for "Edit Student" and "Add Student" buttons

Course Management View (Julia)

- I like the table columns you chose
- Include view for add course and assign teacher
- Make wireframes for when you click anything that says "Delete." We will use this universally across the platform
- Maybe "View Student List" can link to the student list view that you already made (just a thought)

Account Settings View (Aryaman)

- Include a way for the user to edit their personal information. Besides that, I like what you included in terms of information (not all of it will be editable, however)

Student Onboarding (Aryaman)

- **APPROVED!!**
- Make wireframes for success and failed uploads
